

Custom R&D

Research & Development for protecting conventional and specially-designed projects.

Fire suppression should not be considered an enforced purchase for organizations to make because of the law and/or building regulations. Installing the right fire suppression system to protect from fire must be a high priority for all businesses. We understand that you need to have confidence in your company's operations. Our team of fire engineers and consultants are able to design and develop tailored made solutions and services for numerous industries and applications.

Fire-suppression is a complex subject and not one single system is suitable for all circumstances. FirePro engineers have a wide experience within numerous industries, sectors and applications. From the most obvious and easy to install solution, to the most challenging tailor made projects. From electrical rooms, to chemicals, to rare artefacts, to manufacturing equipment, to flammables, we can help you to protect high-risk/high-value assets and operations.

Our mission is to design, produce and support effective, modular and elegant fire protection solutions with sophisticated fire suppression compounds, bespoke to your organization's specific needs and requirements. Moreover, our key partners and industry experts have the depth and expertise from various projects to support you and your company around the world. Lastly, our environmentally friendly technology can help with your sustainability goals.
