

## Services

**Archives, elevator rooms, electrical panels, battery rooms, electrical cables, storage rooms, car parks.**

Safety and risk management are business priorities for both operations and employees. For most businesses offering financial, audit, banking, legal or any other sort of high profile services, a fire can bring them to a halt or even threaten their very existence. Smoke, water, gas and strong vapours can create operational and contamination problems. A fire engineer must be able to help businesses achieve their fire protection goals and compliance with fire code standards while limiting repercussions.

FirePro offers a comprehensive range of fire detection and suppression to suit the needs of diverse buildings and requirements. Our systems offer business continuity by making sure that fire is detected and eliminated at source preventing its spread that can cause serious damage operational equipment and threaten people. The speed and efficiency of FirePro systems entails a reduced amount of collateral damages and minimal loss of equipment and/or other key assets.

The environmentally friendly technology can be arranged as a standalone system or as a fully integrated system to suit the most challenging of fire protection requirements. FirePro compounds are non-conductive, non-corrosive and non-toxic and are friendly to the environment. FirePro fire suppression systems are preferred over other technologies in numerous applications and offer an outstanding track

record for protecting critical assets.
